

PARSA FARAJI ALAMOUTI

Berkeley, CA • parsafaraji@berkeley.edu • [LinkedIn](#) • github.com/parsa-faraji

SUMMARY

UC Berkeley EECS senior and Full-Stack & AI Engineer shipping LLM agents, end-to-end ML pipelines, and production full-stack features across React/TypeScript front-ends, Python back-ends, and modern AI tooling (LLM APIs, RAG, evaluation).

EDUCATION

University of California, Berkeley Aug 2025 – May 2026

B.S. Electrical Engineering & Computer Sciences (EECS) • GPA: 3.9

- Honors: Dean's List, Engineering Honors Society
- Relevant Coursework: Data Structures, Algorithms, Probability, Machine Learning, Data Science, Optimization

Berkeley City College Jan 2023 – May 2025

A.S. Mathematics; A.S. Data Science (Honors) • GPA: 4.0

- Graduated Salutatorian; delivered commencement speech to an audience of 400+
- Co-founded and led the Computer & Data Science Club

EXPERIENCE

1Sphere AI — Founding Software Engineer Nov 2025 – Present

- Designed and shipped multi-step LLM agent systems that autonomously execute end-to-end tasks, improving task completion reliability and consistency across internal benchmarks
- Integrated 5+ external APIs into agent workflows, enabling real-time data access, tool use, and action execution within AI pipelines
- Built AI-driven workflow automation tools that cut manual task time by 30–50% for internal teams by replacing repetitive operations with agent-orchestrated pipelines
- Owned full-stack delivery end-to-end: prompt and tool-schema design, Python back-end services, and TypeScript front-end integration

TokenWorks — Machine Learning Engineer Sep 2025 – Nov 2025

- Built end-to-end preprocessing, training, and evaluation pipelines to systematically benchmark multiple ML models against shared metrics
- Processed and structured datasets of 10K+ entities to power semantic relationship modeling and retrieval-augmented workflows
- Improved retrieval relevance in internal experiments by refining ontology design and query strategies, strengthening downstream RAG quality
- Authored a reusable evaluation harness that surfaced regressions early and standardized model comparison across the team

easy-donate — Full-Stack Developer Mar 2024 – Jun 2024

- Redesigned the online donation funnel, contributing to a 20% lift in conversion rate and a 35% reduction in page load latency
- Refactored legacy REST APIs and UI components into modular, reusable React/Node modules, significantly improving maintainability and onboarding time
- Instrumented donor event logging and anomaly tracking, surfacing behavioral data that informed targeted campaign and outreach strategy

PROJECTS & LEADERSHIP

Real-Time Stroke Detection System Aug 2024 – Dec 2024

- Built a real-time detection backend that fuses physiological signals with a facial-asymmetry computer-vision model to flag suspected strokes
- Engineered a streaming preprocessing pipeline that normalized input frames and reduced lighting noise, lowering false-positive rate and stabilizing predictions
- Achieved ~92% accuracy on internal test cases by tuning detection thresholds and applying temporal smoothing

Berkeley Open Project — Front-End Education Lead Aug 2025 – Present

- Lead the front-end curriculum team, designing and teaching hands-on lessons on HTML, CSS, JavaScript, and React
- Translated complex front-end concepts into hands-on exercises and live demos, improving member confidence and project output

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, C++

AI / ML: LLM APIs (OpenAI, Anthropic), LLM Agents, RAG, Embeddings, Prompt Engineering, Model Evaluation

Full-Stack & Tools: React, Node.js, Flask, REST APIs, Firebase, Git, Docker, Linux, Pandas, NumPy, Scikit-learn
